

NOTE:

1) Input should be from user

2) Use proper indexing and comment

Program 1). Write a program to check Whether a Number is Positive or Negative or Zero.

Program 2). Write a menu driven program for following cases

Case 1: print all even numbers up to 50

Case 2: print square and square root of given number by user

(NOTE: use of library function is allowed)

Program 3). Write a program to find occurrence of each digit in a given number.

e.g. I/P if input number is 12177

O/P will be

1 occurred 2 time

2 occurred 1 time

7 occurred 2 time

-----All the Best-----
